

# HUSKY Health Limited Benefit- Family Planning Coverage

December 2025

# About ICAN!

ICAN guides and resources states to implement Medicaid Family Planning programs to increase access to reproductive care.

We serve as a “**systems orchestrator**” supporting Providers, Patients, Payers, and Policymakers to transform how contraceptive care is delivered, accessed, and paid for with a focus on equity and sustainability.

## Policy analysis and implementation

We identify opportunities to strengthen on-the-books policies and to maximize on-the-ground impact.

## Provider training and technical assistance

We support safety-net providers to deliver and connect patients with person-centered contraceptive care and coverage.

## Patient Engagement

We empower patients to learn about their birth control options, find coverage, deliver feedback to providers, and to access timely and respectful care in their communities.

# HUSKY Family Planning Covered Services

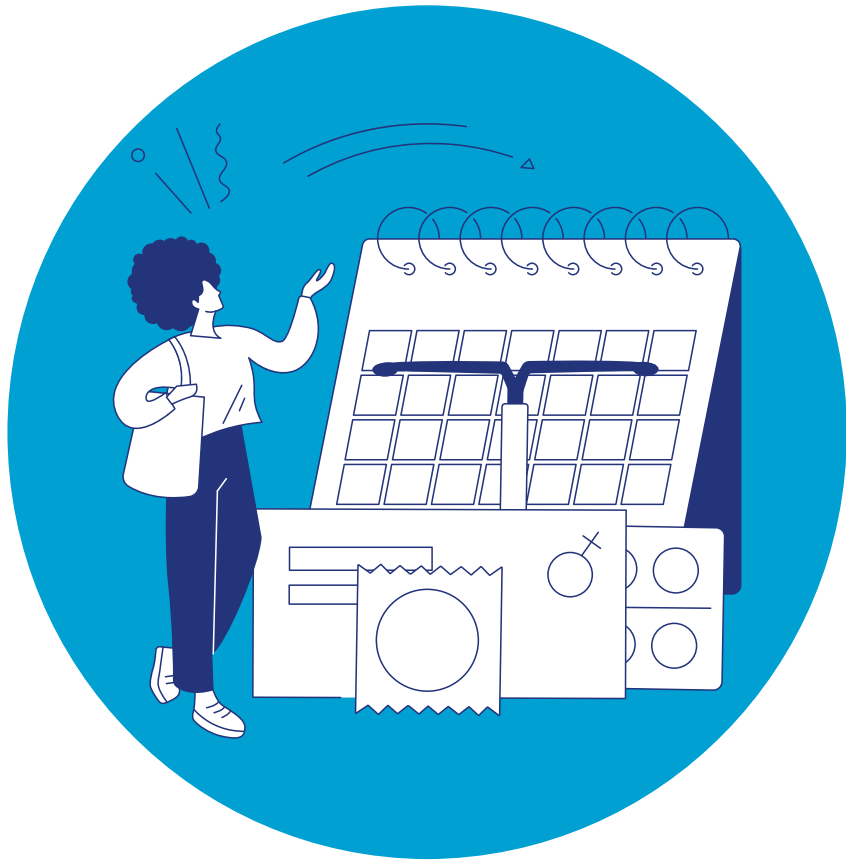

- Annual check-up in person or virtual, if routine preventative primary services are related to family planning.
- Pap test and follow up treatment for abnormal pap smears.
- All FDA-approved birth control (Pill, patch, ring, depo, IUD, implant, emergency contraceptive pill) and permanent methods like tubal ligation and vasectomy (21+).
- STI testing and treatment, including counseling on HIV prevention.
- HPV, Hep B, Flu vaccines.
- Non-emergency medical transportation to doctor visits.

# Feedback from FQHC Providers

- Lack of familiarity with the HUSKY Family Planning program.
- Difficulty finding up to date HUSKY Family Planning program information.
- Lack of awareness of where application is located (on ConneCT site).
- Uncertainty around confidential minor access & enrollment process.
- Request expansion of STI treatment as a pharmacy benefit (instead of medical benefit only).

# Family Planning as a Safety Net

- Many of H.R.1's most burdensome restrictions (work requirements + 2x year redeterminations) **don't apply** to Family Planning programs.
- Opportunity for continued collaboration and technical assistance to FQHCs, especially with the risk of patients losing full HUSKY or Marketplace coverage.
- Seek to share and promote HUSKY Family Planning as a **default** alternative Medicaid program.
- Raise public awareness of the program with trusted community-based organizations and improve family planning messaging that addresses common barriers.
